SDMyers Announces Electric Power IQ to join PowerPro 360

TALLMADGE, OHIO, March 8, 2023 – SDMyers announces that Electric Power IQ will join their sister company, PowerPro 360. As a fellow Good Place Holdings organization, PowerPro 360 is focused on helping organizations achieve 360 degrees of reliability for their electric power distribution system. Led by Chuck Baker as President of PowerPro 360, their core reliability-centered maintenance services include asset management, consulting, networking, and now training.

Electric Power IQ has long been the training service of SDMyers, and they will now operate as part of PowerPro 360. SDMyers is excited about this move. After reviewing the organizational goals for each organization, it was clear that the training service aligned perfectly with their direction and focus. “Electric Power IQ will become a core service of PowerPro 360, and because of our relationship with PowerPro 360, this collaborative move not only made sense but will serve customers in new and better ways for years to come,” said Jon Bucciarelli, President of SDMyers.

PowerPro 360 will serve customers with asset management consulting, training, and an industry forum platform. Electric Power Training (formally Electric Power IQ from SDMyers) will be a complete offering of training courses for electric power and reliability professionals. The industry forum will help serve leaders who need better access to industry resources and tools to help manage their teams and systems.

SDMyers is the pioneer of transformer maintenance training. The first training started in 1975 under the Transformer Maintenance Institute name, with the first maintenance guide being published in 1981. Over the next four and a half decades, they trained more than 32,000 professionals and currently provide more than 150 course offerings through a custom online learning management system.

Stanley D. Myers founded the training organization with the vision to help educate transformer owners on the importance of transformer maintenance so that they could experience the maximum reliable life of their equipment. The heart of that vision will continue through PowerPro 360.

About SDMyers

SDMyers is an industry leader in transformer reliability. As an advocate for reliable low-cost electrical systems, they have created industry-recognized best practices for transformer oil testing, diagnostics, maintenance, and monitoring. They are committed to customers’ electric power system reliability and maintenance needs, and back it up with 58 years of experience and excellence. Their knowledge of transformer health—coupled with the implementation of the right tools—helps SDMyers turn transformer data into knowledge, and knowledge into wisdom. SDMyers is a [Good Place Holdings organization](#) headquartered in Tallmadge, Ohio.

About PowerPro 360

[PowerPro 360](#) launched in 2020 as a Good Place Holdings organization. They provide asset management, training, and professional networking opportunities to help organizations achieve a reliability-centered maintenance program. They help businesses plan, prioritize, trend, and consider the criticality and health of their maintenance programs and electric power equipment assets. PowerPro 360 offices and on-site training location are in Tallmadge, Ohio.
