

Inspection App

DIGITIZE ANY DATA-COLLECTION PROCESS WITH THIS VERSATILE TOOL

Preventive maintenance, compliance, and safety inspections made easy

Equipment inspections are a big part of an electric power reliability plan. Gathering, reporting, and storing data in a way that is accessible and actionable can quickly become a bottleneck. Paper forms and spreadsheet data entry tasks don't cut it for ensuring efficiency, accuracy, and real-time decision-making.

SDMyers has been conducting field inspections for decades, and over that time, we've developed a world-

class inspection app that now has a version available for you. Whether collecting data in the field, performing PM inspections, conducting safety and compliance audits, maintaining NFPA 70B and 70E standards, pulling data from laboratory instruments, or anything in between, the Inspection App can streamline and hassle-proof any data collection process.

*The Inspection App
can streamline and
hassle-proof any data
collection process.*

Increase efficiency

Complete inspections faster and more accurately with a configurable inspection app that allows technicians to collect and submit data straight from the field.

Make data-driven decisions

Stay ahead of equipment issues with an easy-to-read dashboard. You can set custom parameters and access real-time data organized into at-a-glance formats.

Improve safety

Build customized safety checks right into your inspections. Moreover, better asset decisions mean more routine maintenance tasks and less high-risk, break-fix work.

Save time on reporting

Generate safety, compliance, and insurance reports in seconds-not hours. We provide color-coded charts and graphs, clear priority lists, and more.

How it works

The **Inspection App** from SDMyers streamlines how you collect and organize your routine inspection data. We offer a secure, web-based platform that can be configured to digitize any data collection or inspection process. If you check it, you can capture it.

The Inspection App

Inspect, capture, submit—all from the field.

- Customizable forms and fields
- Paperless inspections
- Single point of data entry
- Speech-to-text integration
- Simple, clean interface
- Data verification checks
- Barcode scanning
- Email and export functionality
- Multiple user access
- Photo uploading with comments
- Ability to view previous values
- Optional safety checks

Use a tool similar to the one our Mobile Diagnostic Technicians use in the field and say goodbye to frustrating and cumbersome processes.

The Inspection App is uniquely configured for organizations with significant inspection needs across multiple sites or facilities who desire to save time and money and hassle-proof their data collection processes.
